Linelight is the ideal solution for very high ambients or wherever ceiling connections are not possible: suspended from the ceiling beginning from one side of the wall to the other.

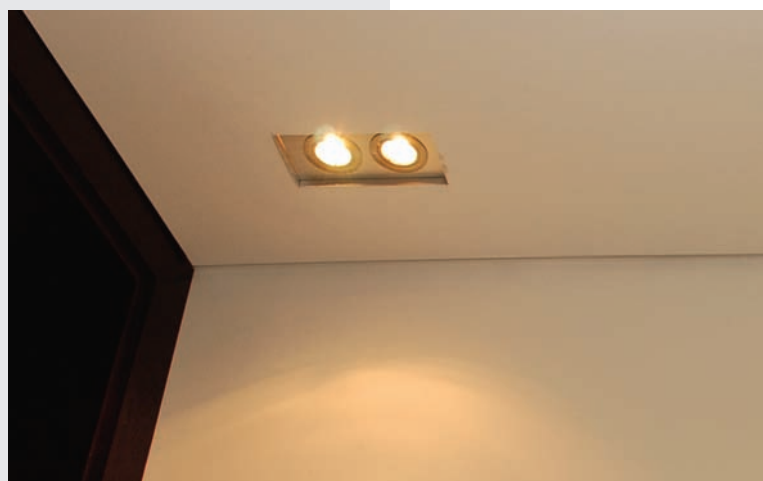

The dual function of the frames which act as both electrical conductors and mechanical supports for the fixtures, gives the system a very light appearance.

A vast range of accessories are available: some profiles can be specially designed to incorporate mini baffles and plugs.

Finishing is made of brushed aluminum that can be painted with electrostatic powder paint in white, black or grey on request.

DL 1834 Linelight

Spots can also be used individually, surface mounted or embedded in false ceiling as shown in the picture.
