Modern and simple, the Multiline Desk Lamp is mostly used on bedside tables or desks. It is also very practical when used to light up an art object.

The Astra Research and Development engineers studied the best way in which the light should be diffused for a maximum visual comfort. A very high level of adjustability is obtained as a result of its reflection sheet.

Made of extruded aluminum, this luminaire can also be painted with electrostatic powder coating in white, grey or black on request.
